

**NOVEMBER 7TH 2023
5 PM CET ON ZOOM**

Prof. Dr. Monika Egerer researches the ecology and management of ecosystems in and around cities. She takes an interdisciplinary research approach, analyzing the relationships among biodiversity, ecosystem services, and human wellbeing. She will talk about the role of urban community gardens as an ideal living laboratory to work with gardeners to develop, test, and implement biodiversity conservation strategies that can be transferred and disseminated to other urban ecosystems.

LIVE TALK BY MONIKA EGERER

Growing Gardens into Neighbourhoods

In ECOLOPES we propose a radical change for city development: instead of minimizing the negative impact of urbanisation on nature, we aim at urbanisation to be planned and designed such that nature – including humans – can co-evolve within the city.
